

J.R. Lynn, CCC Greens Superintendent

Frost Inc. had the pleasure of speaking with J.R. Lynn at Columbus Country Club in Columbus, OH about their experience with the Ultimix Mixing Station. We were excited to hear how the Ultimix has “Improved efficiency of Columbus CC’s spray day exponentially”.

The Columbus Country Club has been recognized as a 2022 Platinum Award Winner and has a deep history of golf in Ohio. With tennis courts, swimming pools, and a wonderful Championship Golf Course; it is a beautiful place to visit. J.R. Lynn grew up around golf courses and loved every minute during his childhood. After high

school, he went to college at Ohio State University and got a job at a golf course in Indianapolis in 2010. He was hired at Columbus CC in 2017 as the Greens Superintendent to finish the master renovation that was completed in 2018.

Before Columbus CC was introduced to the Ultimix, there was no real mixing station used for sprayers. At nearby courses, J.R. had seen and used the benefits of having a mixing station and was now on the hunt for the perfect one for his own club. When J.R. had an opportunity to learn and demo the Ultimix with Frost Inc. it was a “no-brainer” to purchase this mixing station for his crew.

***The Ultimix does its job quickly, efficiently, and the solution agitates perfectly.***

Since owning the Ultimix Mixing Station, it has improved the green’s crew exponentially. “We are saving hours on fairway sprays and are able to stay ahead of golfers.” They keep the sprayers moving the entire time. As one sprayer comes in for a fill up, they will start getting the next batch ready for the next sprayer.

There is literally NO wait time. “This year, we are finished spraying and rinsed out by 10am and the crew is waiting for the next jobs to do *before* lunch!” The Ultimix does its job quickly, efficiently, and the solution agitates perfectly.

The ease and safety of the Ultimix Mixing Station is another benefit at Columbus CC. There is no longer a need to get completely inside the tank to clean or agitate, and there is no hand mixing. It is always a clean mix, and the crew stays safer when handling the chemicals. They are also able to adjust the spray approach with the same amount of time and crew workers. “I like what we’ve found and would recommend it to anybody!”

J.R. has a great partnership with Frost Inc. and enjoys working with the company. He had crossed paths with Mark (sales) in the past, and the way the sale was handled with delivery and communication was “unbelievable”. Compared to competitors, the Ultimix is a no-brainer. Both Frost Inc. and Columbus CC look forward to working together on their future spray needs.
